Organizer Pro: sign-up emails

Files: `index.html` (your site) and `api/signup.js` (sends the email).

Set up (about 15 minutes)

1. **Resend** (resend.com): sign up with file.organizer123@gmail.com. Create an API key. The free test sender can only email the address you signed up with, which is what you want here.
2. **GitHub** (github.com): create a new repository and upload everything in this folder.
3. **Vercel** (vercel.com): sign in with GitHub, click Add New > Project, pick the repository, then
   Settings > Environment Variables and add `RESEND_API_KEY` = your key. Deploy.
4. Open your Vercel link, create a test account, and check the Gmail inbox (and spam folder).

Notes

- Accounts are still stored in each visitor's own browser. Only the email notification is new.
- Anyone could call /api/signup directly and trigger emails. Add rate limiting if that becomes a problem.
- Mention in your Privacy Policy that you receive new users' names and emails.
- Not tested: I can't run Vercel or Resend from here.

Supabase (accounts + a list of everyone who signed up)

1. supabase.com > New project (free). Wait for it to finish setting up.
2. Project Settings > API: copy the **Project URL** and the **anon public key**.
3. Open `index.html`, find `const SUPABASE_URL="",SUPABASE_KEY="";` and paste both values in. (Never paste the `service_role` key.)
4. Authentication > Providers > Email: leave on. Turn **Confirm email** off if you want people signed in instantly; leave it on to make them confirm first.
5. Authentication > URL Configuration: set **Site URL** to your Vercel link.
6. To see everyone who signed up: Authentication > Users. Names are under each user's metadata.

Passwords are handled and stored securely by Supabase, not by this page.
